

# SALLEN-KEY : Build Instructions - Add-On

## The Problem

---

We realized that a few Sallen-Key DIY Kits were shipped with electrolytic capacitors that are slightly larger than the intended size.

Because of this, the capacitors can't be soldered in their original location and need a slightly different assembly.

**When building your DIY Kit, if you notice that your capacitors are the taller version, please follow the steps below.**

## The Solution

---

If the capacitors are too tall to be installed on the front side of the PCB, you can simply solder them on the back side instead.

**Just make sure to double-check their orientation before soldering.**
