

## YouSee Questionnaire

1. Should the visually impaired person be able to call the police and have their location sent through the software if they are to wander into a dangerous area? E.g. A construction site.
2. Should the software be able to track local weather and have the visually impaired person confirm that they are in a safe place? What should happen if they are not?
3. Would accent options for the vocalizer be an appropriate form of customization?
4. Could a Bluetooth peripheral device be considered in the future for added ease of use or stimuli?
5. What type of assistive technology do you consider to be most useful (ex. haptic or auditory devices)?
6. What alternate idea would you have in mind if the camera module isn't detected/working?
7. What add-on devices would you like to use in conjunction to the smartphone?
8. How could we improve the volunteering system so you could find a trustworthy partner?
9. Should the incoming facetime call always ring out or obey the preset preference of the general phone?
10. Should the software have a voice input based 5-star ranking system after getting to your destination successfully
11. Would a smart watch device that monitors your heart rate for improved emergency assessment be helpful?
12. Are there any features you expected to find but didn't?
13. Would you prefer a sound or vibration for hazard alerts?
14. What goals would our app help you achieve?
15. Which features of the following features do you use least?
16. What can we improve?

17. What current applications do you use to support with navigating?
18. How do you avoid collision with objects and people in the area?
19. Are the buttons on the welcome screen large enough for you to make the correct selection, and if not, would you like a button/swipe gesture or vocal cue instead of a button press on the screen?
20. In the event of a false emergency call, would you like to cancel with a vocal cue or a button/swipe gesture?
